

Q. Is Magist a good fit for ENIAC?

A. No

Order Distribution by Tech and Non-Tech

- Relevant tech presence, but not dominant

Monthly Tech vs Non-tech Sales

- Growth in 2017, stability in 2018

Magist's Total Sales

Compare: Eniac 14M revenue in Spain alone

Sales: Tech vs Non-Tech

Review Score

- Positive reviews, but delay-sensitive

Tech - Review Score: Delayed vs On Time

Delivery Status

Repeat Customers

- Good reviews, but poor retention

Number of order per days delyed

- Strong on-time delivery

Estimated Average Delivery Time by Country

- Too-long average delivery estimated days

Popularity Comparison

- High-priced tech products sell only ~2.7 units on average. Magist's ecosystem rewards cheap, high-turnover items, not Eniac's premium catalogue

Avg. Monthly Income per Seller: Tech vs Non-Tech

Magist Tech Avg. Price vs Eniac Avg. Item Price

- Tech sellers earn more, but tech items sell at a fraction of Eniac's price point

Conclusions: Why Magist is not the right fit for Eniac

- **Limited tech focus:** Tech represents only ~20% of Magist's business, not the platform's priority or speciality.
- **Significant price gap:** Eniac's average item price (€540) sits far above Magist's average price (€130).
- **Significant scale mismatch:** Eniac completely dwarfs Magist in the tech sector.
- **Delivery risk:** Delayed deliveries cut customer satisfaction nearly in half (4.2 → 2.8 review score), directly threatening Eniac's core brand promise.
- **Strategic mismatch:** The Eniac's premium, high-touch experience is not aligned with Magist's mid-market infrastructure.

Thank You
